Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a process for metal deposition on a substrate treated with bismuth material, classified in class 427, subclass 299+.
- II. Claims 20-26, drawn to an article comprising a substrate having an electrolytic deposit thereon, classified in class 428, subclass 457+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process could be used to make a materially different product. For example, the process could be utilized to make a substrate that is coated with a metal deposition layer other than one made by electrolytic deposition. Specifically, the process could be utilized to make a substrate wherein the metal layer has been deposited using a non-electrolytic method such as vacuum deposition or sputtering.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1773

A telephone call was made to Peter Corless on Friday November 29, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
